DETAILED ACTION

Election/Restrictions

Applicant's election of Group II, claims 7-13, drawn to a composition, in the reply filed on 15 May 2008 is acknowledged. Because applicant did not distinctly and specifically point out the supposed errors in the restriction requirement, the election has been treated as an election without traverse (MPEP § 818.03(a)). Since applicant elected the Group II claims, by PCT 1.475, Group I, claims 1-6, and the elected article of Group III, claims 14 and 15, will be examined herewith. Claim 29 was inadvertently listed with the Group II claims, yet would properly been listed as a separate specie of Group III.

Claims 1-15 are being examined.

Claim Rejections - 35 USC § 112

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claims 2, 3 and 4 recites the limitation "metal halide." There is insufficient antecedent basis for this limitation in the claim.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

Art Unit: 1796

(e) the invention was described in a patent granted on an application for patent by another filed in the United States before the invention thereof by the applicant for patent, or on an international application by another who has fulfilled the requirements of paragraphs (1), (2), and (4) of section 371(c) of this title before the invention thereof by the applicant for patent.

The changes made to 35 U.S.C. 102(e) by the American Inventors Protection Act of 1999 (AIPA) and the Intellectual Property and High Technology Technical Amendments Act of 2002 do not apply when the reference is a U.S. patent resulting directly or indirectly from an international application filed before November 29, 2000. Therefore, the prior art date of the reference is determined under 35 U.S.C. 102(e) prior to the amendment by the AIPA (pre-AIPA 35 U.S.C. 102(e)).

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1-15 are rejected under 35 U.S.C. 102(e) as anticipated by or, in the alternative, under 35 U.S.C. 103(a) as obvious over Ishii et al (US 7,347,986), newly cited.

The reference to Ishii et al shows the production of mixed titania-silica crystals by a "process comprising decomposing gaseous titanium halide and gaseous silicon halide each heated at 600°C or more in the presence of oxygen or water vapor heated at 600°C or more to obtain a powder comprising titanium oxide and silicon oxide." Note column 7 (lines 8-28). The rates of the reactant addition is shown at column 7 (lines 50-57). The use of a Henschel mixer is shown at column 15 (lines 3-19). The BET specific

Art Unit: 1796

surface area of the crystals is taught to be "10 to 200 m²/g, as in claims 7-9. Note the Abstract. Note Example 3 for a range of inclusion of the silica to the titania crystals. The Examples show a variance of second metal halides to the primary titanium halide. A skilled artisan would know to manipulate these amounts for the benefits derived therefrom, such as hydrophobicity, cost of materials, etc.. Subsequent use in a cosmetic is shown at column 27 (lines 3-59).

The reference fails to teach the specific bulk density of the crystals. However, all other parameters being equal, including the process of manufacture and the subsequent milling, which in itself would be an obvious step to an artisan desirous of a finer filler in the cosmetic, the mixed crystals appear to otherwise identical, and the usage, identical, as well. As such, the instant claims are deemed to be at least obvious, if not anticipated, by the teachings of Ishii et al.
